

**2nd International Meeting on
Differential Equations and Applications**
March 9-11, 2026 • Madrid (Spain)

**Plagiarism and self-plagiarism
in mathematical scientific production**

Ma To Fu

Universidade de Brasília

In addition to being honored at the event, Professor Ma To Fu, Full Professor at the University of Brasília, delivered this lecture on the morning of March 11, 2026.

In his talk, Professor Ma To Fu provided a rigorous discussion of the concepts of plagiarism and self-plagiarism within mathematical scientific production, highlighting the new challenges posed by the use of artificial intelligence tools. In particular, he emphasized the importance of transparency in the use of AI-generated content and the need to establish clear standards for authorship in mathematical research.

He also analyzed how certain contemporary practices, including the proliferation of digital content and academic writing services, contribute to the normalization of improper conduct. Through illustrative examples and case studies, he stressed the importance of promoting academic integrity, especially in the training of early-career researchers.

The lecture combined strong theoretical insight with practical guidance, offering conceptual tools and critical reflections that were very well received by the audience.
